

## **Portrait Photography Project Brief**

### **Project 3: Studio Lighting Due: 19th November**

#### **Objective**

Using off camera lighting techniques and split frequency post-processing take 2 portraits using the Brenizer method and 3 close-up portraits. Process in an editorial manner, not necessarily fashion. Take some guidance from TIME, Newsweek, Forbes and other business magazines in addition to fashion magazines.

#### **Outcome**

Create a Power-Point slide show of 5 images. When creating your presentation, place the untouched image next to the fully processed image to show the level of processing.

In addition, be sure to speak about composition and the use of the grids and other compositional elements as well as the technical aspects of the camera and how they enhance your image.
